Portfolio: <http://diptap.me/>

Objective

Seeking a challenging career in the Software designing and software development field in the local and global market applying my academic coursework and programming skills.

Education

- 2019–2022 **Bachelor of Science Computer Science & Engineering:** American International University, Dhaka, Bangladesh
CGPA: 3.77/4
- 2018 **Higher Secondary Education:** Chattogram City Corporation Kaiser-Nilufar College, Bangladesh GPA: 3.69/5.00
- 2016 **High School Education:** Lamabazar A.A.S City corporation Boys High School, Bangladesh
GPA: 4.89/5.00

Areas of Interest

Web designing, Software Development.

Projects

- Advance Web Designing(.net) **Online Medicine Service** is the name of my project. This project was designed through ASP.NET MVC, ASP.NET web API, and React JS. There are four types of users in this project they are Admin, Staff, Customers, and Delivery man. My contribution was in writing the complete ASP.NET MVC, backend(ASP.NET web API(SOLID and 3 tier app)), and frontend(react js) code for the Customers part of the website.
[ASP.NET MVC](#) | [Backend \(ASP.NET web API\)](#) | [Frontend \(react JS\)](#)
- Advance Web Designing **Online Shopping Website-Eflip** is the name of my project. This project was designed through the Laravel framework and React js. There are four types of users in this project they are Admin, Staff, Customers, and Delivery man. My contribution was in writing the complete backend (Laravel) and frontend (react js) code for the Customers part of the website.
[Backend \(Laravel\)](#) | [Frontend \(react JS\)](#)
- Advance Web Designing(Spring - framework) **Online flower shop** is the name of my project. This project was designed through spring framework(no-XML) java. There are two types of users in this project and they are Admin and Customers. My contribution was in writing the complete code for the website.
[Spring-framework](#)
- Swap-World Mobile Resela I have created this project with react js library for the client side, node.js and database for MongoDB, for server-side hosting done on firebase. I have done two login systems, they are google, email & password login. In this project I have created using useState, useEffect, createContext, useContext, react-router, imgbb, Axios, stripe-js, react-hook-form, Api, fetch, loader, and many more.
